

HIT - A/C — Keepin' it cool!

Each room is equipped with a passive cooling system, designed to meet strict environmental standards. This system is energy-efficient and completely silent, offering a comfortable indoor climate without the typical noise or direct airflow of conventional air conditioning units.

Please note that this system works by gently circulating the air in the room, rather than blowing out cold air through a fan. Guests—especially those accustomed to traditional AC systems in the U.S.—may find this difference noticeable. Keep in mind that the lowest temperature setting is 17.5°C.

In compliance with local environmental regulations, the system is calibrated to maintain a maximum temperature difference of 7°C between the room and the outside air. If you would prefer a stronger cooling effect or a more direct breeze, we are happy to provide an extra standing fan upon request at the reception.
